

Module 133.0.1 :: Prerequisites :: Quick Start

Prerequisites :: Quick Start

This ungraded module reviews the prerequisites material for this course. Take the time to review each module to make sure that you have the appropriate preparation for this course. In particular, transfer students and graduate students should make sure that they are comfortable with material that may not have been presented in prior coursework. If you've never programmed in Java before, take the time to familiarize yourself with the Java programming environment.

Reading Quick Start

1. Get cozy on your couch, lawnchair, hammock, computer desk, wherever you like to work and read **Think Java** cover to cover. Skip over the parts you know, skip the exercises for now, just read the concepts and think about what you understand and how it relates to your previous coursework. Read the things that are new to you twice.

Note: Even though this module is ungraded, you must take the time to mark each of the topics as complete in order to take the prerequisite survey and move on to the next module.
